Satna, Madhya Pradesh | 8109260602 | pranawgautam@gmail.com | [LinkedIn](#) | [GitHub](#)

Professional Summary

Computer Programmer with strong programming and data pipeline background using Python, Object-Oriented Programming, and SQL. Expertise building and testing applications, developing REST APIs with FastAPI, and debugging and updating existing code to improve performance. Skilled at collaborating with development teams and leveraging Docker, Git, and AWS services to deploy robust software solutions.

Technical Skills

- **Programming Languages:** Python, Pandas, NumPy, SQL, Statistical Analysis, Exploratory Data Analysis, Object-Oriented Programming
- **Backend Development:** Fast API, REST API Development
- **Business Intelligence & Visualization:** Power BI, Matplotlib, Seaborn, Dashboard Development, Interactive Reporting
- **Databases & Data Management:** PostgreSQL, MySQL, Data Cleaning, End-to-End Pipelines
- **Cloud & DevOps:** AWS, EC2, S3, Docker, Git, GitHub, Databricks

Experience

Shanti Infosoft LLP | Data Science Intern

Jan 2026 - Jun 2026

- Implemented data preprocessing pipelines using Python (pandas, NumPy) and applied code modeling techniques to structure modular, reusable components.
- Conducted exploratory data analysis (EDA) to identify patterns and designed flowcharts to map analysis workflows.
- Visualized data using Matplotlib and Seaborn to communicate insights effectively.
- Debugged Python scripts and optimized code performance to ensure reliability of data pipelines.
- Collaborated with team members to review code, implement software updates, and test applications through full development cycles.

Projects

Global Space Missions Analysis

- Focus: Power BI, Data Visualization, SQL, Data Modeling
- Architected a comprehensive Power BI dashboard analyzing 15,000+ global space mission records (1957–Present), creating interactive visualizations to track launch success rates and agency performance.
- Designed an end-to-end business intelligence solution for space launch analytics, transforming raw datasets into actionable insights using advanced Power BI chart types and DAX calculations.
- Engineered scalable data models for historical and projected space exploration data, optimizing complex queries to ensure seamless dashboard rendering and dynamic filtering.
- Developed Python scripts to automate data ingestion and implemented debugging routines to ensure data integrity in ETL processes.

Air Quality & Pollution Tracking System

- Led an end-to-end environmental data analysis pipeline, writing and debugging Python (Pandas, NumPy) scripts and using flowcharts to design data workflows.
- Led an end-to-end environmental data analysis, utilizing Python (Pandas, NumPy) to clean multi-regional pollution datasets by resolving missing values using forward-fill techniques and standardizing temporal data.
- Developed dark-themed, interactive analytics dashboards integrating custom Matplotlib and Seaborn visualizations to highlight pollutant correlations and Air Quality Index (AQI) trends.
- Extracted, transformed, and visualized complex environmental data, building robust tracking models that map the concentration of PM2.5, NO2, and other pollutants across major global cities over time.
- Documented and maintained reusable code libraries for environmental data transformations, collaborating with team members to debug and optimize core functions.
- Built dynamic BI dashboards to monitor global AQI fluctuations, utilizing correlation matrices to identify primary drivers of poor air quality.

Education

AKS University | Master of Computer Application (MCA) (GPA: 8.65 / 10)

Satna

APS University | Bachelor of Computer Application (BCA)

Rewa

Certifications

- AWS Cloud Practitioner (Foundational)
- Data Science Internship Certification – Shanti Infosoft LLP
- National GEOR – Game of Enterprise Risk 2025
